

REACH Statement

All products manufactured by Copely Developments do not contain any SVHC's as per the latest lists issued by the European Chemical Agency (ECHA) on the 15th June 2026.

In February 2015 DOP reached its sunset date and could no longer be used in the manufacture of any PVC products (with the exception of some medical devices).

In order to ensure that ourselves and our customers were not caught out by this change, we carried out extensive research and testing on all of our materials throughout 2014. As a result of this we have been using non DOP plasticisers in all of our PVC products since September 2014.

We are happy to fully certify all of our PVC, Nylon (PA) and polyurethane (TPU) products as SVHC free and phthalate free.

If you want to ensure that you are getting a high quality product that complies with all current legislation then please contact Copely for your requirements.

Signed

A handwritten signature in grey ink, appearing to read "Stephen Walton".
